EVOS M7000 Cell Imaging System

Description
The Invitrogen™ EVOS™ M7000 Cell Imaging System is an automated digital inverted microscope for 4-color fluorescent, transmitted-light, and colorimetric applications.

Manufacturing disclosure
Thermo Fisher Scientific is the sole manufacturer of the EVOS M7000 Cell Imaging System. The system is sold and serviced only by Thermo Fisher Scientific and authorized distributors.

Differentiating features
• New high-resolution CMOS cameras for improved resolution, sensitivity, and higher image quality (dual color and monochrome cameras)
• Enhanced scan speed and autofocus functions for improved throughput and data quality
• Fully automated and motorized X/Y scanning stage, refined autofocus, and multiple options for automation routines
• Simultaneous acquisition in 4 fluorescence channels and transmitted light
• Powerful PC with graphics processing unit (GPU) for fast processing of large data sets and demanding visualization applications
• Optional Invitrogen™ Celleste™ Image Analysis Software for automated analysis of 2-dimensional and 3-dimensional samples
• Compatibility with the Invitrogen™ EVOS™ Onstage Incubator for precise control of temperature, humidity, and gases for normoxic or hypoxic conditions allows a wide range of biological studies under physiological conditions

Applications
• Neurobiology
• Immuno-oncology
• Live-cell imaging
• 3D cell imaging (e.g., organoids, spheroids)
• High-resolution tile scanning
• Immunohistochemistry (IHC)
